

# KESTREL CLASS SUMMER 2

We are already halfway through our summer term! We had a very busy first half term as you can see from these photos. In design & technology, the class really enjoyed designing and testing the structural integrity of bridges made from different materials. Various dissolving and filtering methods were explored during science lessons, and conditional selection ('if button is pressed, then do x') was implemented as part of microcomputer programming in computing.

## Summer 2 Curriculum

Our English will focus on persuasive writing; we will be trying to convince the council not to build new housing along the river. This will of course link with our continued study of rivers in geography, and culminate with a trip to the River Tiffey where we will plot grid-coordinates, identify physical and human features and reflect on the river's historic use.

In science, we will continue our exploration of material types and state changes. As well as examining properties like hardness and transparency, we differentiate between which changes are reversible and irreversible.

In art, we will build on the concepts explored in our parent café and complete the Angelica Dass-inspired Humanae project. We will start by mixing primary colours to find our exact skin tone before overlaying line art portraits onto this background.

Year 5 have the very exciting opportunity to perform their music sequence at the Royal Norfolk Show. They cannot wait to show everyone what they have been working on!

## Dates & Notes

- Tuesday 10th June: Trip to the River Tiffe
- Week beginning 30th June: Transition Week
- Thursday 26th June: The Royal Norfolk Show
- PE will take place on Wednesdays in summer. Please come to school in PE kits.
- Tuesday 22nd July: Last day of term
